## TEXTURE ADDITIVE

Texturing additive polymer powder for base coats, clear coat or gel coat can create an even and attractive, slip resistant texture or safety tread for spa, bath, boat or floor surfaces. The grit is translucent and will not change the overall color of the coating. (Add 1 oz. per gallon).

Available in three grit sizes:

- Fine (powder size) 100 mesh
- Medium - Most Common (sugar size) 40-60 mesh
- Heavy (salt size) 40 mesh

Range of applications: marine, shower, utility, hot tubs, pool decks, steps, stairs, walkways, ramps, garage, patios, decks, floor finish, interior floors, and exterior floors. Industrial grade polymer suspends evenly in coatings or resin: Use in clear coat, epoxy, sealers, polyurethane as well as color coatings. Excellent in shop paint to create a sand texture treatment, slip resistant floor or step-on grip.

**Note:** No floor or grip treatment can prevent slips and falls completely. Avoid using this terminology when using MTP texturing additives in advertisements or written claims associated with professional slip resistance treatment applications or services: Non-Skid, no-slip, non-slip, anti-skid, anti-slip.
